the application of biologically engineered solutions to environmental problems has become far more readily acceptable and widely understood however there remains some uncertainty amongst practitioners regarding how and where the microscopic functional level fits into the

macroscopic practical applications it is precisely this gap which the book sets out to fill dividing the topic into logical strands covering pollution waste and manufacturing the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology essential reading for undergraduates and masters students taking modules in biotechnology or pollution control as part of environmental science environmental management or environmental biology programmes it is also suitable for professionals involved with water waste management and pollution control

environmental biotechnology is an emerging field of scientific and technological investigations that is truly global people around the world are now joined together by a common technical bond furthermore popular recognition is high for the environmental problems being faced and solved by biotechnology methods with a feeling of winning but recognizing there is much work to be done workers with in depth experience in solving one problem in environmental biotechnology meet to learn from the background of other workers how they too are addressing and solving environmental problems this text includes papers from the third biennial meeting of the international society for environmental biotechnology the iseb held in boston massachusetts on the campus of northeastern university technical oral presentations of state of the art research were integrated with tutorials and workshops by practising technologists in the broad field of environmental biotechnology this meeting was in every respect truly global for example presentations were heard from technical workers in southeast asia russia china europe north africa india and the united states by having these selected presenters all participants benefited from this interactive symposium various persons of political stature were the keynote banquet and luncheon speakers these social events further promoted informal exchange of ideas discussions of technical problems and exploration of new applications this international symposium on environmental biotechnology was held on the campus of northeastern university but all boston area universities were included and participated as conference co chairs this symposium was considered a success because workers with experience in one area of environmental biotechnology learned from the wealth of established backgrounds of those in other areas of environmental biotechnology to formally disseminate conference results all technical presentations were reviewed for formal publication

an introduction to environmental biotechnology provides an introduction to the subject of environmental biotechnology environmental biotechnology refers to the use of micro organisms and other living systems to solve current environmental problems such as the detoxification of pollutants and clean up of oil tanker spills additionally it refers to the biotechnology of the agricultural environment as well as the use of biopesticides and the application of microorganisms to the mining metal recovery and paper industries this is the only comprehensive introductory account of this subject matter beginning with an introduction to microbial growth an introduction to environmental biotechnology aims to provide the non specialist with a complete overview of environmental biotechnology it is presented in an easy to read style with

illustrations and includes frequent references to the use of higher plants as well as micro organisms in environmental biotechnology an introduction to environmental biotechnology is geared toward a non specialist audience including engineers and environmental chemists and environmental scientists who have limited knowledge of microbiology and biotechnology

the environment is an all encompassing component of the ecosystem of blue planet the earth made up of the hydrosphere atmosphere and lithosphere these three spheres have biotic and abiotic components which exhibit ecological homeostasis that provides the most appropriate survival chances for the members of biotic component and geochemical balance with abiotic components this ecosystem is subjected to relatively harsh conditions mostly created by the disastrous activities due to natural calamities and intentional and or accidental anthropogenic activities biotechnology has become a potential tool to dissipate such environmental impacts because of the advancement it has undergone recently emerging trends in environmental biotechnology is an outstanding collection of current research that integrates basic and advanced concepts of biotechnology such as genomics proteomics bioinformatics sequencing and imaging processes to improvise and protect the environment this book is particularly attractive for scientists researchers students educators and professionals in environmental science agriculture veterinary and biotechnology science the book will enable them to solve the problems about sustainable development with the help of current innovative biotechnologies such as recombinant dna technology and genetic engineering which have tremendous potential for impacting global food security environmental health human and animal health and overall livelihood of mankind features presents easy to read chapters information is presented in a very accessible and logical format identifies and explores biotechnological approaches for environmental protection encompasses biodegradation of hazardous contaminants biotechnology in waste management nanotechnology and issues in environmental biotechnology research
